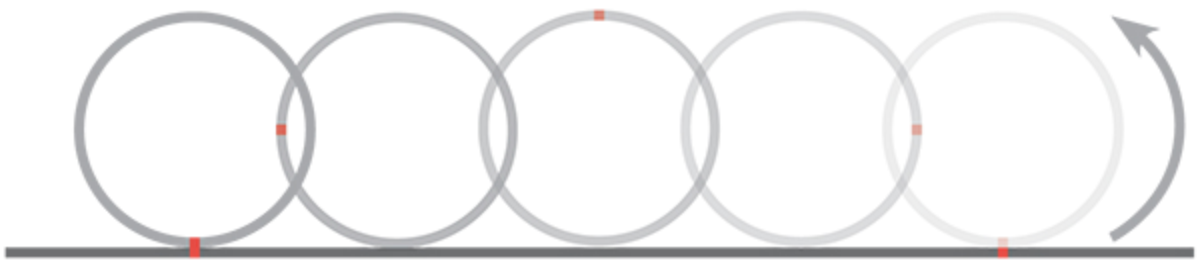
HOW TO MEASURE BLADE LENGTH

If you are unsure of what size you need do the following.

1. Remove the bandsaw blade from your bandsaw.

2. Place a mark on the inside of your blade and then place the blade on the ground with the mark lining up with a mark on the ground.



3. Roll the Bandsaw blade along the ground like a wheel until the mark is back on the ground. Mark this location.

4. Measure the distance between the ground marks and you will have your bandsaw length.
